This allows you to make local edits to an image in a single layer without affecting surrounding layers. And while the new Photoshop CC does have this feature, like its Photoshop Competition counterparts, it's minimal and hardly worth mentioning if you're not using it. The Local Adjustments panel in Photoshop CC is for people who want custom instructions just for them. This is as powerful as the "Auto" and "Enhance" adjustments in Lightroom, however it's only available in the advanced options. More and more applications are trying to mimic the ease-of-access of Photoshop's tools, but Photoshop still edges out the rest with its capabilities. There is a reason why Photoshop is still the dominant design software. I know of a student who uses Photoshop to design everything, from portraits to logos to t-shirts. With this update, you can enrich your photo stream with images taken from a specific folder, tag, or album. But that means you'll have to take the effort of choosing the files you want to use at the server, duplicating the images, and attaching each one to its own e-mail. Mac users can now also export their files directly to the ones without Photoshop or Elements. Users of the iLife apps are already able to export to other applications. The next thing that needs to happen is that Apple will have to add these exporting possibilities to the Photos app.

And when they want to hand these images off to apps that don't natively support the standard, they can convert them to their format of choice—via the new Optional WebP Plug-In—without losing resolution or extending workflows unnecessarily. The industry has changed a lot since Adobe's introduction of Photoshop. Its most powerful features have largely been replaced by innovative AI-based technology. Where photoshop used to be known as the premier image editing software, it has now become the premier design software.
